

~Mother Earth is Dying~

By: Joan Pacinabo

Mother Earth looks so older day after day,
Her green hair is balding and has turned to gray.
She can acquire a disease so easily,
Because of weak resistance and the cancer of ovary.

Because of too much heat of the sun,
Mother Earth skin acquired more than sunburn.
Because of fumes and smog she can't avoid to inhale,
And the solid waste we used to dump in the river or sea.
She drunk contaminated water,
The Doctors said there's nothing they can do to cure her,
And she's going to leave us sooner or later.

Mother Earth is so sick...
What are we going to do in order to help?
I am one of the reasons of her sickness.
I'm murdering her, my Lord God forgive me please...
I'm ready to face what-so-ever the payback.
When Mother Earth will get revenge in these lists of facts.
